Manage limited inventory

Prevent customers from holding inventory in carts by expiring Checkout Sessions.

[Full hosted page](#)[Full embedded page](#)[Embedde](#)

For some types of limited-inventory businesses, it's necessary to prevent customers from reserving items for a long time without completing the purchase. For example, an event ticket seller wants to allow customers only a few minutes to buy their selected tickets before cancelling the sale and making those tickets available again. You can cancel a pending sale by expiring the **Checkout Session**.

Checkout supports both manual and timed session expiry. When a Checkout Session expires, its **status property** changes to `expired`.

Manual expiry

To immediately expire an open Checkout Session and cancel any pending purchase, use the **expire** endpoint.

📄 Command Line

cURL

```
$ curl -X POST https://api.stripe.com/v1/checkout/sess  
> -u 'sk_test_51U61AQLSaqo35Y3ikyr...MRrYfMAD1d00Z2c'
```

Set an expiry time

When you create a Checkout Session, specify an expiration timestamp by setting the **expires_at** parameter. The value must be between 30 minutes and 24 hours after the current time. If you don't specify **expires_at**, the default value is 24 hours after the current time.

Accounts v2

Customers v1

📄 Command Line

cURL

```
$ curl https://api.stripe.com/v1/checkout/sessions \
>   -u sk_test_Y17KokhC3SRyCQTLyU5ZCD2: \
>   -d customer_account='{CUSTOMER_ACCOUNT_ID}' \
>   -d "line_items[0][price]"='{PRICE_ID}' \
>   -d "line_items[0][quantity]"=1 \
>   -d mode=payment \
>   -d success_url="https://example.com/success" \
>   -d expires_at="{NOW_PLUS_TWO_HOURS}"
```

Return items to your inventory

When a **Checkout Session** expires, Stripe sends the `checkout.session.expired` event. Configure your webhook endpoint to listen for this event so your webhook handler can return to inventory any items reserved in the expired session. For more information, see [Expire a Session](#).
